Dear Hiring Manager,

I am writing to express my strong interest in engineering opportunities at your organization. With over six years of hands-on experience as a Java Backend Developer—and currently completing my Master's in Management Information Systems with a 4.0 GPA—I bring a powerful blend of real-world system design, backend engineering, and cloud-native application development.

Throughout my career, I've led the end-to-end development of distributed microservices, event-driven systems, and real-time data pipelines using **Java, Spring Boot, Kafka, and AWS**. At Nokia and LTIMindtree, I transformed legacy platforms into scalable, resilient architectures that improved performance by up to 50%. I've implemented secure API ecosystems via **APIGEE**, orchestrated containerized services with **Docker and Kubernetes**, and integrated messaging solutions with **Kafka and Redis Pub/Sub**.

My work spans industries including telecom, pharma, and enterprise IT—where I've consistently delivered CI/CD-ready, test-covered (98%+), production-grade solutions in **Agile** environments. I also bring frontend experience with **Angular, Bootstrap, and JavaScript**, along with cloud proficiency across **AWS, Azure, and GCP**.

What distinguishes me is my adaptability and ownership. Whether mentoring junior developers, optimizing a batch process, or migrating monoliths to microservices, I approach each challenge with a growth mindset and a relentless focus on user impact.

I'm excited about the opportunity to join an innovation-driven team where I can contribute immediately while continuing to grow. I am open to relocation and eager to explore roles where engineering excellence, collaboration, and continuous learning are core values.

Thank you for considering my application. I look forward to the possibility of discussing how I can contribute to your team's goals.

Sincerely,
Aayushi Jain
